1.0	User Information
	<p>Copyright 2004 by Kontron Hamburg GmbH & Co.KG. In this document Kontron Hamburg GmbH & Co.KG will also be referred to as "Kontron Hamburg".</p> <p>The information in this document has been carefully revised and, to the best of knowledge, is accurate and reliable. However, no responsibility is assumed for any inaccuracies that may appear. Furthermore, Kontron Hamburg reserves the right to make changes to any portion of this manual to improve reliability, function or design. Kontron Hamburg does not assume liability for any product or circuit described herein.</p>
1.0	Trademarks
	<p>AT and IBM are trademarks of International Business Machines Corporation.</p> <p>XT, AT, PS/2 and Personal System/2 are trademarks of International Business Machines Corporation.</p> <p>Microsoft is a registered trademark of Microsoft Corporation.</p> <p>Intel is a registered trademark of Intel Corporation.</p> <p>All other products and trademarks mentioned in this manual are trademarks of their respective owners.</p> <p>Reproduction, relay or unauthorized use of this document or its content is prohibited unless given explicit written consent.</p> <p>Offenders will be liable to pay damages. All rights granted by patent grant or registration of a utility model or design are reserved.</p>
1.0	General
	<p>No responsibility is assumed for the circuits, descriptions and tables indicated as far as patents or other rights of third parties are concerned. The information given in the technical description describes the type of boards and should not be considered as absolute.</p> <p>Reproduction, relay or unauthorized use of this document or its content is prohibited unless given explicit written consent. Offenders will be liable to pay damages. All rights are reserved, including rights created by patent grant or registration of a utility model or design.</p>

1.0	Warranty
	<p>Each board is carefully and thoroughly tested before being shipped. If, however, problems should occur during operation, please first check the user settings of all boards present in your system, as this is quite often the source of the fault. If a board is defective, it can be sent to your supplier for repair. Please make sure of the following:</p> <ul style="list-style-type: none"> - The board should be returned with all parameters set to their factory default, since a test is only possible with these settings. - We require certain additional information so that we may repair your board as quickly as possible. Please fill out the repair form provided and include it with the defective board. - It is possible that the board will be upgraded to the latest version at no extra cost. <p>When you receive the board, please be aware that any user settings you may have set will have been changed during the test.</p> <p>Repair is free of charge within the guarantee period as long as the conditions for guarantee are met. If no fault is found, you will be charged the cost of the test, due to the high expense to perform the test. Repairs outside the guarantee period will be charged.</p> <p>Warranty is provided for this Kontron Hamburg product against material and workmanship defects for the warranty period, starting from the shipping date. During the warranty period, Kontron Hamburg will, at its discretion, either repair or replace products that prove to be defective.</p> <p>The product must be returned to a service facility designated by Kontron Hamburg for warranty service or repair.</p> <p>The foregoing warranty shall not apply to defects resulting from improper use or handling, inadequate maintenance, unauthorized modification or misuse, operation in environmental conditions other than those specified for the product, or improper installation or maintenance.</p> <p>Kontron Hamburg will not be responsible for any defects or damages due to a faulty Kontron Hamburg product if it has not been directly supplied by Kontron Hamburg.</p>

1.1	dFLAT-AGP-1 Features
	<p>ATI Mobility Radeon M6 (16 MB DDRAM), M7 (32 MB DDRAM) or M9 (64 MB DDRAM) graphics controller</p> <p>Full AGP support, including 2x and 4x modes, sideband addressing and AGP texturing</p> <p>2D / 3D graphics accelerator</p> <p>Up to 1600x1200 resolution at True Color (16.7 M)</p> <p>Integrated dual-channel LVDS interface at up to 85 MHz per channel. Integrated TMDS transmitter running up to 165 MHz supporting up to 1600x1200 at 60 Hz. Fully compliant with DVI and DFP connection standards</p> <p>Dual view in extended mode allows simultaneous, independent LCD / CRT or DVI / CRT output</p> <p>Powerful drivers for WIN 95, WIN 98, WIN ME, WIN NT4.0, WIN 2K, WIN XP and LINUX</p> <p>Board size: 134x90 mm</p> <p><i>Guaranteed long-term availability – up to 5 years!</i></p>

1.2	Introduction
1.2.1	<u>The JILI interface</u> The JILI interface is based on FFC (Flat Foil Cable). JILI is standard for many available cable kits and LVDS receivers.

JILI adapter signals:

- LVDS signals (1 or 2 pixel/clock)
- Display power available (3.3V, 5V or 12V)
- Enable LCDVCC control signal
- Backlight on / off control signal
- Backlight power (5V or 12V)
- DDC signals (not free useable)
- Display detect signal

(40-pole 0.5 mm pitch)

JILI cable (FFC)

JILI connector

1.2.2	<u>The JILI40 interface</u> The JILI40 interface is based on a 2x20-pin 2.0 mm pitch connector. Several cable kits are available.
--------------	---

JILI40 connector signals:

- LVDS signals (1 or 2 pixel/clock)
- Display power available (3.3V, 5V or 12V)
- Enable LCDVCC control signal
- Backlight on / off control signal
- DDC signals (not supported)
- Display detect signal (not supported)

(2x20 pin 2.0 mm pitch)
JILI40 connector

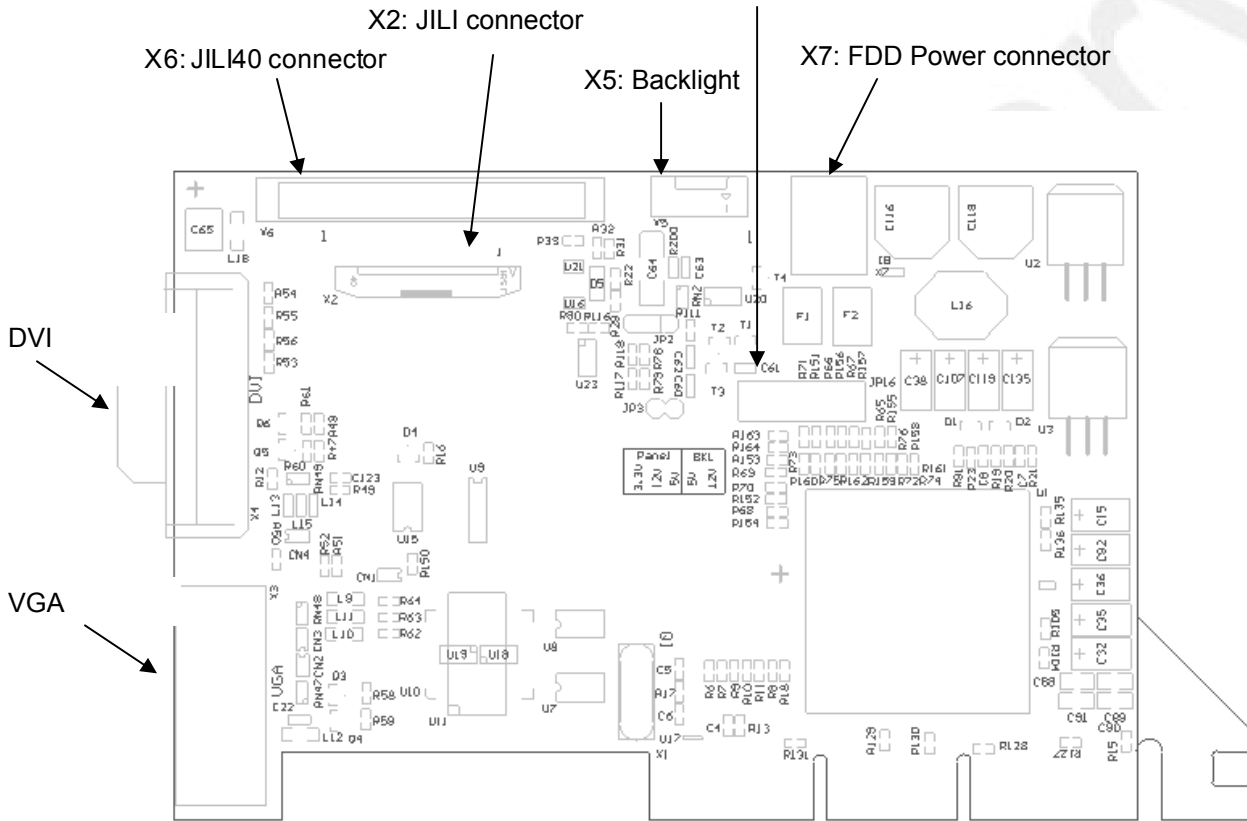

JILI40 mating connector

Please visit our website for more information about our products: www.kontron-hh.com

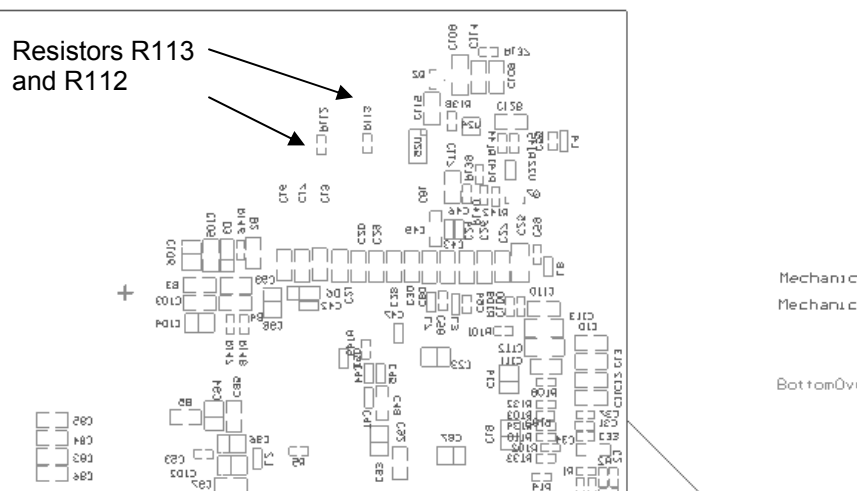

dFLAT-AGP-1 Mechanical Layout

Front side:

JP16: Backlight and flatpanel power configuration

Back side:

1.4	Connecting a Flatpanel
	<p>There are basically two possibilities for connecting a flatpanel to the dFLAT-AGP-1 card: using the JILI interface (40 pin flat foil cable on connector X2) or using the JILI40 interface (40 pin IDC connector X6). The first option requires an additional adapter cable by which the panel voltage and the backlight voltage can be set. The JILI40 interface, on the other hand, is available for passively connecting a panel, i.e. the flatpanel and backlight voltages must be set on the dFLAT-AGP card (JP16). Only in this case the backlight connector X5 have any significance.</p> <p>The 40-pin JILI cable (flat foil) is mostly used for connecting small panels (up to XGA resolution) while, as a rule, high-resolution displays (greater than XGA) require the passive connection. You can find out more about suitable adapters on the website www.kontron-hh.com.</p> <p>The dFLAT-AGP card has its own internal database of maximum 31 panel records. It is based on KONTRON's JILI3 software interface. The principle behind this is basically the allocation of identification numbers (IDs) by which the desired record can be called up. The IDs and panels currently supported are listed on the KONTRON website. If your panel is not listed, please consult your distributor. If using an external JILI adapter with flat foil cable, it is possible that this does not yet contain any JILI3 record, which would result in the panel not responding. In this case, the data memory on the adapter must be reprogrammed with a correct JILI3 record (using the DOS tool ATIMx.EXE as described later in this manual).</p> <p>EXAMPLE: What must I consider when using, for example, an SXGA panel (passive connection with the IDC connector X6):</p> <ol style="list-style-type: none"> 1. Check whether your panel already has a JILI3 ID 2. Make or order a suitable cable for the connector X6 3. Make or order a backlight cable for the connector X5 4. Select the correct panel and backlight voltages with jumper JP16 5. Switch on the assembly without the display attached 6. Run the program ATIMx.EXE and transmit the JILI3 file (see below) 7. Restart the assembly, this time with the display attached

1.5	Multiple Display Devices
	<p>The display output can be sent to three separate devices simultaneously: an analogue CRT (or comparable device), a digital DVI monitor and a panel with fixed parameters. There are two distinct applications to be considered: The boot phase (DOS mode) and the activation of a special driver for other operating systems (e.g. Windows or Linux). In the above mentioned configuration, the panel determines the resolution and frequencies in DOS mode. The DVI monitor must also be able to handle different input frequencies (example: the panel supports SVGA and the DVI device SXGA). The parameters for the DVI monitor are read over the DDC connection. Should the panel resolution be greater than that of the DVI monitor, no data will be output.</p> <p>There are various parameters for working with in extended mode, offered by the special drivers (Windows and Linux). Each screen can be driven at its own specific resolution.</p>

1.6	The DOS Tool ATIMx.EXE
	<p>This tool lets you update the BIOS, read and write JILI3 files and test the backlight dimming voltage. The accompanying program ATIFLASH.EXE is only a helper utility (please do not run it separately). A German-language version can be run by specifying option 'ger' at the command prompt.</p>

	<p>The line “Graphic controller” states the controller type (M6 / M7 / M9) while the line “BIOS revision” states the current BIOS version. More lines follow under these, listing the JILI3 IDs currently implemented to let you check whether the desired flatpanel is already in the table.</p>
--	---

F2 BIOS Update

The VGA BIOS reprogramming begins immediately after entering the file name. This process must NOT be interrupted on any account (e.g. by warm starting) until a message displays that programming is successful. A manual restart is required to activate the new VGA BIOS.

F3 Write External Eeprom

This option is only available for the external adapter with 40 pin (flat foil) JILI cable (connector X2). It allows you to program a JILI3 file. Only a valid JILI3 file guarantees trouble-free functioning of the panel. The corresponding data can be downloaded from www.kontron-hh.com

F4 Read External Eeprom

This function lets you read back a JILI3 file from an external adapter.

F5 Write Internal Eeprom

This is the function for writing a JILI3 file when connecting a panel using a JILI40 connector (IDC connector X6). Only a valid JILI3 file guarantees trouble-free functioning of the panel. Activation requires a manual restart. **The BIOS file is required to run this function.**

F6 Read Internal Eeprom

This lets you read back the JILI3 file programmed with F5.

F7 Backlight

This generates the dimming voltage for both the backlight connection on the dFLAT-AGP (X5) card and the external adapter driven via connector X2 (provided this adapter has a Type MAX536x DAC component). The value 0 corresponds to approx. 0 V and 255 corresponds to approx. 5 V.

1.7 Connectors

1.7.1

Backlight connector X5

Apply operating voltage for backlight inverter using connector X5

Single row connector, 7 pin, case / size: right angle, 1.25mm pitch

	Pin	Name	Description
X5	1	NC	Not connected
	2	Backlight dimming control	(analog signal 0V to 4.9V)
	3	GND	Power Ground
	4	Backlight power supply	5 / 12 V DC (Switched) see JP16
	5	Backlight power supply	5 / 12 V DC (Switched) see JP16
	6	GND	Power Ground
	7	BLON	Backlight control signal (TTL)

1.7.2

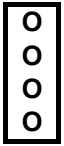

JILI- Interface X2

All JILI (JUMPtec Intelligent LVDS Interface) signals are LVDS compatible.

Flat foil connector 40 pin, right angle, bottom contact case / size: 0.5mm Pitch, series: 6210 / ZIF

Description	Name	Pin	Pin	Name	Description
Not connected	LTGIO0	1	2	FTX0-	Odd Receiver Signal(-) (R1IN 0-)

1.7.4 External DC power X7			
Attention!!!: Additional current required for backlight and panel can be supplied via external power connector X7. Resistors R112 and R113 must be removed for this option.			
4 contact connector, single row, right angle, polarization, through hole			
	Pin	Name	Description
X7 	1	+5V	+5 V DC Power
	2	GND	Power Ground
	3	GND	Power Ground
	4	+12V	+12 V DC Power

1.7.5 Backlight and flatpanel supply voltage configuration JP16

This configuration is only valid for X2, X5 and X7.
Use jumpers 1-2, 3-4, 5-6, 7-8 or 9-10 to configure the required supply voltage.

Caution! Only one configuration is allowed for backlight and flatpanel, otherwise the board will be damaged.

Double row connector 2.54 mm, 10 pin, gold plated
case / size: vertical, through hole

Pin	Pin	Name	Description	Delivery Default	
JP16	1	2	+3.3V	+ 3.3V DC for flat panel supply voltage	Open Open 5-6 closed Open 9-10 closed
	3	4	+12V	+ 12V DC for flat panel supply voltage	
	5	6	VCC	+ 5V DC for flat panel supply voltage	
	7	8	VCC	+ 5V DC for backlight supply voltage	
	9	10	+12V	+ 12V DC for backlight supply voltage	

1.7.6 DVI connector

This connector supports the connection of DVI or DVI-I (for VGA adapter)

Double row connector 2.54 mm, 10 pin, gold plated
case / size: vertical, through hole

Description	Name	Pin	Pin	Name	Description
Receiver Signal(-) (RX2-)	RX2-	1	2	RX2+	Receiver Signal(+) (RX2+)

1.9	Power Supply															
	<p>The dFLAT-AGP-1 card requires +3.3V, +5V and +12V voltage supplied by the AGP bus. The 2.5V voltage is generated onboard. The AGP bus can also supply +12V for the backlight. The external power connector X7 can supply extra power for backlight and panel if required and, if so, resistors R112 and R113 must be removed.</p>															

2.0	Environmental Specifications
	<p><u>Temperature</u> Ambient 0 °C to 50 °C, see note (*1) Storage -40 °C to 85 °C</p> <p><u>Thermal gradient</u> Operating 25 °C per hour Non-operating 40 °C per hour</p> <p><u>Relative Humidity</u> Operating 5 % - 90 % RH non-condensing Non-operating 0 % - 95 % RH non-condensing</p> <p><u>Mechanical</u> Shock 50G/20ms square wave maximum Vibration 1G/0-600Hz, dwell not to be exceeded</p> <p><u>Altitude</u> Operating 0 - 3000 m Non-operating 0 - 5000 m</p> <p>(*1) The maximum temperature on the module surface can exceed above mentioned ambient temperature. It is the user responsibility to keep this temperature within the above specification. (*2) Attention, for currents greater 1A (5V and 12V) an external power supply must be connected to X7 (resistors R112 and R113 must be removed).</p>

2.1	Technical Support
	<p>Please report any errors or problems to this email address: sales-graphic@kontron.com.</p> <p>Normally, there is no telephone support. Please include the following information in your email message:</p> <p>Company name Your name Address Email Telephone / fax Exact description of the hardware, etc. Exact description of the software in use (for example: Win 95 with driver XYZ) Exact description of the fault.</p>
