High Risk Applications Hazard Notice

THIS DEVICE AND ASSOCIATED SOFTWARE ARE NOT DESIGNED, MANUFACTURED OR INTENDED FOR USE OR RESALE FOR THE OPERATION OF NUCLEAR FACILITIES, THE NAVIGATION, CONTROL OR COMMUNICATION SYSTEMS FOR AIRCRAFT OR OTHER TRANSPORTATION, AIR TRAFFIC CONTROL, LIFE SUPPORT OR LIFE SUSTAINING APPLICATIONS, WEAPONS SYSTEMS, OR ANY OTHER APPLICATION IN A HAZARDOUS ENVIRONMENT, OR REQUIRING FAIL-SAFE PERFORMANCE, OR IN WHICH THE FAILURE OF PRODUCTS COULD LEAD DIRECTLY TO DEATH, PERSONAL INJURY, OR SEVERE PHYSICAL OR ENVIRONMENTAL DAMAGE (COLLECTIVELY, "HIGH RISK APPLICATIONS").

You understand and agree that your use of Kontron devices as a component in High Risk Applications is entirely at your risk. To minimize the risks associated with your products and applications, you should provide adequate design and operating safeguards. You are solely responsible for compliance with all legal, regulatory, safety, and security related requirements concerning your products. You are responsible to ensure that your systems (and any Kontron hardware or software components incorporated in your systems) meet all applicable requirements. Unless otherwise stated in the product documentation, the Kontron device is not provided with error-tolerance capabilities and cannot therefore be deemed as being engineered, manufactured or setup to be compliant for implementation or for resale as device in High Risk Applications. All application and safety related information in this document (including application descriptions, suggested safety measures, suggested Kontron products, and other materials) is provided for reference only.

Document Revision History

Revision	Date	By	Comment
G	07/2019	CW	Include new power notice in 3.6 Power Specicifcation
F	05/ 2019	CW	Included new note for the power connection
E	01/2018	CW	BIOS Update – Advanced>ICC Configuration changed. Kontron AG changed to Kontron S&T AG
D	06/2016	CW	7.13 Always on Jumper setting (J36) updated Replaced Kontron Techology with Kontron AG and then Kontron
C	04/2015	GSZ	NEW memory SKU
B		MLA	Minor changes
A	12-1-2015	MLA	LVDS panel support description improved. Cooler PN corrected. Note -12V use. Added PEG Bifurcation info. Added BIOS section. EXT_BAT max. 3.47 V. BIOS section added. Added more DP adapter info.
0	6-11-2013	NRM/MLA	Preliminary version

Terms and Conditions

Kontron warrants products in accordance with defined regional warranty periods. For more information about warranty compliance and conformity, and the warranty period in your region, visit http://www.kontron.com/terms-and-conditions.

Kontron sells products worldwide and declares regional General Terms & Conditions of Sale, and Purchase Order Terms & Conditions. Visit http://www.kontron.com/terms-and-conditions.

For contact information, refer to the corporate offices contact information on the last page of this user guide or visit our website CONTACT US.

Customer Support

Find Kontron contacts by visiting: http://www.kontron.com/support.

Customer Service

As a trusted technology innovator and global solutions provider, Kontron extends its embedded market strengths into a services portfolio allowing companies to break the barriers of traditional product lifecycles. Proven product expertise coupled with collaborative and highly-experienced support enables Kontron to provide exceptional peace of mind to build and maintain successful products.

For more details on Kontron's service offerings such as: enhanced repair services, extended warranty, Kontron training academy, and more visit http://www.kontron.com/support-and-services/services.

Customer Comment

If you have any difficulties using this user guide, discover an error, or just want to provide some feedback, contact Kontron support. Detail any errors you find. We will correct the errors or problems as soon as possible and post the revised user guide on our website.

For your Safety

Your new Kontron product was developed and tested carefully to provide all features necessary to ensure its compliance with electrical safety requirements. It was also designed for a long fault-free life. However, the life expectancy of your product can be drastically reduced by improper treatment during unpacking and installation. Therefore, in the interest of your own safety and of the correct operation of your new Kontron product, you are requested to conform with the following guidelines.

High Voltage Safety Instructions

As a precaution and in case of danger, the power connector must be easily accessible. The power connector is the product's main disconnect device.

⚠CAUTION	Warning All operations on this product must be carried out by sufficiently skilled personnel only.

⚠CAUTION	**Electric Shock!** Before installing a non hot-swappable Kontron product into a system always ensure that your mains power is switched off. This also applies to the installation of piggybacks. Serious electrical shock hazards can exist during all installation, repair, and maintenance operations on this product. Therefore, always unplug the power cable and any other cables which provide external voltages before performing any work on this product. Earth ground connection to vehicle's chassis or a central grounding point shall remain connected. The earth ground cable shall be the last cable to be disconnected or the first cable to be connected when performing installation or removal procedures on this product.

Special Handling and Unpacking Instruction

NOTICE	**ESD Sensitive Device!** Electronic boards and their components are sensitive to static electricity. Therefore, care must be taken during all handling operations and inspections of this product, in order to ensure product integrity at all times.

Do not handle this product out of its protective enclosure while it is not used for operational purposes unless it is otherwise protected.

Whenever possible, unpack or pack this product only at EOS/ESD safe work stations. Where a safe work station is not guaranteed, it is important for the user to be electrically discharged before touching the product with his/her hands or tools. This is most easily done by touching a metal part of your system housing.

It is particularly important to observe standard anti-static precautions when changing piggybacks, ROM devices, jumper settings etc. If the product contains batteries for RTC or memory backup, ensure that the product is not placed on conductive surfaces, including anti-static plastics or sponges. They can cause short circuits and damage the batteries or conductive circuits on the product.

Lithium Battery Precautions

If your product is equipped with a lithium battery, take the following precautions when replacing the battery.

⚠CAUTION	Danger of explosion if the battery is replaced incorrectly.
	• Replace only with same or equivalent battery type recommended by the manufacturer.
	• Dispose of used batteries according to the manufacturer's instructions.

KONTRON Technical Support and Services

If you have questions about installing or using your KONTRON Product, then please notice that you will find many answers in this Users Guide. To obtain support please contact your local Distributor or Field Application Engineer (FAE).

Before Contacting Support: Please be prepared to provide as much information as possible:
- CPU Board
    1. Type.
    2. Part Number (find PN on label)
    3. Serial Number if available (find SN on label)
- Configuration
    1. DRAM Type and Size.
    2. BIOS Revision (find the version info in the BIOS Setup).
    3. BIOS Settings different than *Default* Settings (refer to the BIOS Setup section).
- System
    1. O/S Make and Version.
    2. Driver Version numbers (Graphics, Network, and Audio).
    3. Attached Hardware: Harddisks, CD-Rom, LCD Panels etc.

If the Kontron product seems to be defect and you want to return it for repair, please follow the guide lines from the following page:

1   Introduction

This manual describes the KTQM87/mITX board made by KONTRON. This board will also be denoted KTQM87 within this Users Guide.

The KTQM87 board is based on the QM87 chipset, support 4th generation Intel® Haswell i7 -, i5 -, i3 2Core and 4Core mobile processors, and Celeron. See "Processor Support Table" for more specific details.

Use of this Users Guide implies a basic knowledge of PC-AT hard- and software. This manual is focused on describing the KTQM87 board's special features and is not intended to be a standard PC-AT textbook.

New users are recommended to study the short installation procedure stated in the following chapter before switching-on the power.

All configuration and setup of the CPU board is either done automatically or manually by the user via the BIOS setup menus. Only exception is the "Load Default BIOS Settings" Jumper.

Latest revision of this manual, datasheet, BIOS, drivers, BSP's (Board Support Packages), Mechanical drawings (2D and 3D) can be downloaded from here: http://www.kontron.com/products/boards-and-mezzanines/embedded-motherboards/mini-itx-motherboards/ktqm87-mitx.html

2   Installation Procedure

2.1   Installing the Board

To get the board running follow these steps. If the board shipped from KONTRON has already components like RAM and CPU cooler mounted, then relevant steps below can be skipped.

1. **Turn off the PSU (Power Supply Unit)**

   ⚠️ **Warning**: Turn off PSU (Power Supply Unit) completely (no mains power connected to the PSU) or leave the Power Connectors unconnected while configuring the board. Otherwise components (RAM, LAN cards etc.) might get damaged. Make sure only to use standard ATX PSU running the board with non-compliant ATX PSU may damage the board within minutes.

2. **Insert the DDR3 DIMM 240pin DIMM module(s)**
   Be careful to push it in the slot(s) before locking the tabs. For a list of approved DDR3 DIMMs contact your Distributor or FAE. See also chapter "System Memory Support".

3. **Cooler Installation**
   Make sure the heat paste etc. on the cooler is intact and cover the full area of the CPU. Connect Cooler Fan electrically to the FANCPU connector.

4. **Connecting Interfaces**
   Insert all external cables for hard disk, keyboard etc. A monitor must be connected in order to change BIOS settings.

5. **Connect and turn on PSU**
   Connect PSU to the board by the ATX+12V-24p and the ATX+12V- 4p connectors.

6. **Power Button**
   If the board does not start by itself when switching on the ATX PSU AC mains, then follow these instructions to start the board. Install the Always On Jumper in the Always On position or toggle the PWRBTN_IN# signal (available in the FRONTPNL connector), by momentary shorting pins 16 (PWRBTN_IN#) and pin 18 (GND). A "normally open" switch is recommended.

7. **BIOS Setup**
   Enter the BIOS setup by pressing the <F2> key during boot up.
   Enter "Exit Menu" and Load Setup Defaults.
   Refer to the "BIOS Configuration / Setup" section of this manual for details on BIOS setup.

   Note: To clear all BIOS settings, including Password protection, activate "Load Default BIOS Settings" Jumper for ≈10 sec (without power connected).

8. Mounting the board in chassis

⚠ **Warning**: When mounting the board to chassis etc. please notice that the board contains components on both sides of the PCB which can easily be damaged if board is handled without reasonable care. A damaged component can result in malfunction or no function at all.

When fixing the Motherboard on a chassis it is recommended using screws with integrated washer and a diameter of ≈7mm. Do not use washers with teeth, as they can damage the PCB and cause short circuits.

2.2 Requirements IEC60950

Take care when designing chassis interface connectors in order to fulfil the IEC60950 standard.

When an interface or connector has a VCC (or other power) pin which is directly connected to a power plane like the VCC plane:
To protect the external power lines of the peripheral devices the customer has to ensure:
- Wires have suitable rating to withstand the maximum available power.
- That the enclosure of the peripheral device fulfils the fire protecting requirements of IEC60950.

Lithium battery precautions

CAUTION! Danger of explosion if battery is incorrectly re- placed. Replace only with same or equivalent type recommended by manufacturer. Dispose of used batteries according to the manufacturer's instruc- tions.	**VORSICHT!** Explosionsgefahr bei unsachgemäßem Austausch der Batterie. Ersatz nur durch den selben oder einen vom Hersteller empfohlenen gleichwertigen Typ. Entsorgung gebrauchter Batterien nach Anga- ben des Herstellers.
ATTENTION! Risque d'explosion avec l'échange inadéquat de la batterie. Remplacement seulement par le même ou un type équivalent recommandé par le producteur. L'évacuation des batteries usagées conformément à des indications du fabricant.	**PRECAUCION!** Peligro de explosión si la batería se sustituye incorrectamente. Sustituya solamente por el mismo o tipo equivalente recomendado por el fabricante. Disponga las baterías usadas según las instrucciones del fabricante.
ADVARSEL! Lithiumbatteri – Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandøren.	**ADVARSEL!** Eksplosjonsfare ved feilaktig skifte av batteri. Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten. Brukte batterier kasseres i henhold til fabrikantens instruksjoner.
VARNING! Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.	**VAROITUS!** Paristo voi räjähtää, jos se on virheellisesti asennettu. Vaihda paristo ainoastaan lalteval- mistajan suosittelemaan tyyppiln. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

3   System Specifications

3.1   Component main data

The table below summarizes the features of the KTQM87/mITX embedded motherboard.

Form factor	KTQM87/mITX: miniITX (170.18 mm by 170.18 mm), Height approx. 39 mm (35.5 mm from top of PCB board)
Processor	On board CPU variants Support 4rd Generation Intel® Core™ (Haswell Mobile) processors BGA 1364 (max 47W TDP) • Intel® Core™ i7 • Intel® Core™ i5 • Intel® Core™ i3 • Intel® Celeron 4x 5 GT/s point-to-point DMI interface to PCH and 2/3/4/6/8MB internal cache.

Memory	• DDR3 DIMM 240pin socket (2 sockets)
	• Support single and dual ranks DDR3 1333/1600MT/s (PC3-10600/PC3-12800)
	• Support system memory from 1x 1GB up to 2x 8GB.
	    Notes: Less than 4GB displayed in System Properties using 32bit OS
	        (Shared Video Memory/PCI resources is subtracted)
	• ECC supported

Chipset	Intel QM87 PCH (Platform Controller Hub) • Intel ® VT-d (Virtualisation Technology for Directed I/O) • Intel ® TXT (Trusted Execution Technology) • Intel ® vPRO • Intel ® AMT (Active Management Technology) version 9.0 • Intel ® A T (Anti-Theft Technology) • Intel ® HD Audio Technology • Intel ® RST (Rapid Storage Technology) • Intel ® RRT (Rapid Recover Technology) • SATA (Serial ATA) 6Gb/s and 3Gb/s. • USB revision 2.0 • USB revision 3.0 • PCI Express revision 2.0 • ACPI 3.0b compliant • Triple Display support (Triple Graphic Pipes) • Blue-ray HD video playback
Security	• Intel® Integrated TPM 1.2 support
Management	• Intel® Active Management Technology (Intel® AMT) 9.0

Audio	Audio, 7.1 Channel High Definition Audio Codec using the VIA VT1708S codec • Line-in and Line-out • Surround output: SIDE, LFE, CEN, BACK and FRONT • Microphone: MIC1 and MIC2 • SPDIF-Out (electrical Interface only) • On-board speaker (Electromagnetic Sound Generator like Hycom HY-05LF)
Video	Intel ® i3, i5 & i7 4rd Generation Mobile processors support Intel ® HD Graphics 4600. 3x digital display ports via the Intel® Haswell CPU: • 3x DP (DisplayPorts), comply with DisplayPort 1.2 specification. • HDMI panel support via DP to HDMI Adapter Converter. • DVI panel support via DP to DVI Adapter Converter. • VGA panel support via DP to VGA Adapter Converter. • LVDS panel support up to 2 pixel/clock 24 bit colors (VESA and JEIDA) • Triple independent pipes for Mirror or Triple independent display support • Triple independent pipes for triple independent or cloned displays are supported from OS. Any 3 displays via DP1, DP2, DP3 and LVDS can be used.
I/O Control	Via ITE IT8516E Embedded Controller via LPC Bus interface
Peripheral interfaces	• Four USB 3.0 / USB 2.0 on I/O area • Four USB 2.0 ports on internal pinrows • Two Serial ports (RS232) on internal pinrows • Four Serial ATA-600 (Two further SATA ports implements in mSATA connectors) • RAID 0/1/5/10 support
LAN Support	• 1x 10/100/1000Mbits/s LAN (ETHER1) using Intel® Clarksville WGI218LM Gigabit PHY connected to QM87 supporting AMT 9.0 • 1x 10/100/1000Mbits/s LAN (ETHER2) using Intel® *Pearsonville* I211AT PCI Express controller • PXE Netboot supported. • Wake On LAN (WOL) supported

Expansion Capabilities	• PCI-Express slots:
	  • Slot PCIex16 (Gen 2.0 & 3.0).
	    Support PEG Bifurcation 1x x16 (default) or 2x x8 or 1x x8 + 2x x4.
	  • 1x mPCIe/mSATA connector with USB 2.0 port
	  • 1x mPCIe/mSATA connector w.USB 2.0, support for 3G modem (SIM socket)
	• SMBus, compatible with ACCES BUS and I2C BUS, (via Feature connector)
	• SPI bus routed to SPI connector (BIOS Recovery module interface)
	• DDC/AUX Bus routed to DP connector (Auto detect to DDC when using passive DP to HDMI or DVI adapters)
	• 18 x GPIOs (General Purpose I/Os), (via Feature connector)
	• DAC, ADC, PWM and TIMER (Multiplexed), (via Feature connector)
	• WAKE UP / Interrupt Inputs (Multiplexed), (via Feature connector)
	• 3 Wire Bus for GPIO Expansion (up to 152 GPIOs), (via Feature connector)
	• 8 bit Timer output, (via Feature connector)

Hardware Monitor Subsystem	• Smart Fan control system, support Thermal® and Speed® cruise for two on-board Fan connectors: CPU Fan (on-board) and System Fan (on-board) • Thermal inputs: CPU Die temperature (precision +/- 3ºC), System temperature (precision +/- 3ºC) • Intrusion (Case Open) detect input, (via Feature connector) • Sleep S5# Indication, (via Feature connector) • System Powergood Signal, (via Feature connector)
Power Supply Unit	ATX/BTX (w. ATX+12V) PSU, 24-pin and 4-pin
Battery	Exchangeable 3.0V Lithium battery for on-board Real Time Clock and CMOS RAM. Manufacturer Panasonic / Part-number CR-2032L/BN, CR2032N/BN or CR-2032L/BE. Approximate 6.2 years retention. Current draw is less than 4.2µA when PSU is disconnected and 0 µA in S0 – S5. **CAUTION: Danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.**

BIOS	• Phoenix BIOS (EFI core version)
	• Support for ACPI 3.0 (Advanced Configuration and Power Interface), Plug & Play
	    • Suspend (S1 mode)
	    • Suspend To Ram (S3 mode)
	    • Suspend To Disk (S4 mode)
	• "Always On" BIOS power setting
	• RAID Support (RAID modes 0,1, 5 and 10)
	•

Operating Systems Support	• Windows XP (32b*, limited support may apply) • Windows 7 (32b + 64b *) • Windows 8 (32b + 64b *) • Linux • VxWorks • WES7 (32b + 64b) *= Out Of The Box installation test only.

Environmental Conditions	**Operating**: 0°C – 60°C operating temperature (forced cooling). It is the customer's responsibility to provide sufficient airflow around each of the components to keep them within allowed temperature range. 10% - 90% relative humidity (non-condensing) **Storage:** -20°C – 70°C; lower limit of storage temperature is defined by specification restriction of on-board CR2032 battery. Board with battery has been verified for storage temperature down to -40°C by Kontron. 5% - 95% relative humidity (non-condensing) **Electro Static Discharge (ESD) / Radiated Emissions (EMI):** All Peripheral interfaces intended for connection to external equipment are ESD/ EMI protected. EN 61000-4-2:2000 ESD Immunity EN55022:2006+A1:2007 class B Generic Emission Standard. **Electrical Fast Transients (EFT) (Burst):** EN 61000-4-4 Burst Immunity. **Safety:** IEC 60950-1: 2005, 2nd Edition UL 60950-1 CSA C22.2 No. 60950-1 Product Category: Information Technology Equipment Including Electrical Business Equipment. Product Category CCN: NWGQ2, NWGQ8. File number: E194252 **Shock:** IAW IEC 60068-2-27, Test Ea, shock, 18 shocks 3 per axis, 6 directions. Shock pulse 50g, 11ms halfsine. **Bump:** IAW IEC 60068-2-29, Test Eb, Bump, 3000 bumps, 500 per axis, 6 directions. Half Sine Waveform Acceleration 2g; Pulse Duration 11ms. **Vibration:** IAW IEC 60068-2-64, Test Fh, Random Vibration. 90 min per axis, 3 axes, at 1.9 grms, with PSD: 10-20 Hz: 0.05 g²/Hz and 20-500 Hz: -3dB/octave. **Theoretical MTBF:** 219.028 / 161.225 hours @ 40ºC / 60ºC for the KTQM87/mITX **Restriction of Hazardous Substances (RoHS):** All boards in the KTQM87 family are RoHS compliant. **Capacitor utilization:** No Tantalum capacitors on board Only Japanese brand Solid capacitors rated for 100 ºC used on board

3.2   KTQM87 Block Diagram

3x DisplayPort 1.2	
LVDS flat panel interface	**Intel Processor HASWELL-mb BGA**

2x 240 pins DDR3 UDIMM 240-pin Dual Channel (PC3 10600/12800) Size 1GB – 16 GB	
PCIe x16 (x16slot) Graphics	

4x USB3.0/USB2.0 8x USB2.0	
VIA Audio Codec	**PCH Lynx Point-Mobile**
LAN1 Intel Clarkville 10/100/1000Mb	
LAN2 Intel Pearsonville 10/100/1000Mb	

4x SATA (SATA3.0, RAID 0, 1, 5, 10) (mSATA shared with mPCIe)
1x mPCIe/mSATA w. USB2.0 1x mPCIe/mSATA w. USB2.0 & SIM Card
SPI BIOS Flash

TPM (Infineon)	
2x COM (RS232)	**Embedded Controller ITE8516**
6-pin PS/2 Keyboard/Mouse	
2x Fan (CPU/System)	

Feature connector:

SMBus/I2C

GPIO/DAC/ADC/PWM
GPIO expansion (up to 152)
Intruder detection

3.3   Processor Support Table

KTQM87 is designed to support the following BGA1364 Mobile processors:

4th generation Intel® Core™ i7 processor

4th generation Intel® Core™ i5 processor

4th generation Intel® Core™ i3 processor

4th generation Celeron

The BGA CPU is premounted from factory. Kontron has defined the board versions as listed in the following table, so far all based on Embedded CPUs. Later other versions are expected.

KTQM87/mITX variants		CPU					
Name	Sales PN	Speed	Turbo	Embed.	Cache	Sspec	TDG/Tj
KTQM87/mITX i7-4860EQ	810554-4500	1.8GHz	3.2GHz	No	6MB	SR195	47W/100ºC
KTQM87/mITX i7-4700EQ	810550-4500	2.4GHz	3.4 GHz	Yes	6MB	SR17L	47W/100ºC
KTQM87/mITX i5-4400E	810551-4500	2.7GHz	-	Yes	3MB	SR17M	37W/100ºC
KTQM87/mITX i3-4100E	810552-4500	1.6GHz	-	Yes	3MB	SR17N	37W/100ºC
KTQM87/mITX Cel-2000E	810553-4500	2.2GHz	-		2MB		37W/

Sufficient cooling must be applied to the CPU in order to remove the effect as listed as TDG (Thermal Design Guideline) in above table. The sufficient cooling is also depending on the worst-case maximum ambient operating temperature and the actual worst-case load of processor.

The KTQM87&mITX is delivered with premounted cooler, the Kontron PN 1056-2605 "CPU Cooler KTQM87":

Height above PCB = 44.7mm

Fan Adda AD5012UB-C7B ⟶
Up to 7000 RPM

Alu fin ⟶
Cupper plate ⟶
Backplate ⟶
3.4   System Memory support

The KTQM87/mITX has two DDR3 UDIMM sockets. The sockets support the following memory features:

- 2x DDR3 1.5V/1.35V UDIMM 240-pin
- Dual-channel with 1 UDIMM per channel
- From 1GB and up to 2x 8GB.
     Note: If using 32bit OS then less than 4GB in displayed in System Properties
               (Shared Video Memory/PCI resources is subtracted)
- Single/dual rank unbuffered 1333/1600MT/s (PC3-10600/PC3-12800)
- SPD timings supported
- ECC supported

The installed DDR3 DIMM should support the Serial Presence Detect (SPD) data structure. This allows the BIOS to read and configure the memory controller for optimal performance. If non-SPD memory is used, the BIOS will attempt to configure the memory settings, but performance and reliability may be impacted.

Memory Operating Frequencies

Regardless of the DIMM type used, the memory frequency will either be equal to or less than the processor system bus frequency. For example, if DDR3 1600 memory is used with a 1333 MHz system bus frequency processor, the memory clock will operate at 167 MHz. The table below lists the resulting operating memory frequencies based on the combination of DIMMs and processor.

DIMM Type	Module name	Memory Data transfers [MT/s]	Processor system bus frequency [MHz]	Resulting memory clock frequency [MHz]	Peak transfer rate [MB/s]
DDR3 1066	PC3-8500	1066	1066 / 1333	133	8533
DDR3 1333	PC3-10600	1333	1333 / 1600	167	10666
DDR3 1600	PC3-12800	1600	1333	167	10666
DDR3 1600	PC3-12800	1600	1600	200	12800

Notes: Kontron offers the following memory modules:

NEW SKU 04/2016*	SKU Name**	OLD SKU before 04/2016
1060-2492	DDR3-1333 DIMM 2GB	1054-3702
1060-2494	DDR3-1333 DIMM 4GB	1054-3703
1060-2496	DDR3-1333 DIMM 8GB	1054-3704
1060-2498	DDR3-1600 DIMM 2GB	1054-3707
1060-2500	DDR3-1600 DIMM 4GB	1054-3708
1060-2488	DDR3-1600 DIMM 8GB	1052-5601

*SKU changes were caused by administrative issues only, no hardware changes.
**Named are always the min. requirements, the shipped memory can fulfill a higher performance level

Memory modules have in general a much lower longevity than embedded motherboards, and therefor EOL of modules can be expected several times during lifetime of the motherboard. Kontron guarantees that the above P/N will be maintained so that EOL module will be replaced by other similar type of qualified module.

As a minimum it is recommend using Kontron memory modules for prototype system(s) in order to prove stability of the system and as for reference.

For volume production you might request to test and qualify other types of RAM. In order to qualify RAM it is recommend configuring 3 systems running RAM Stress Test program in heat chamber at 60^{0}C for a minimum of 24 hours.

3.5   KTQM87 Graphics Subsystem

The KTQM87 equipped with Intel ® i3, i5 or i7 processor, supports Intel ® HD Graphics 4600, however the i7-4860EQ supports Intel Iris™ Pro graphics 5200. All KTQM87 versions support three DisplayPort directly from the processor. The DP interface supports the DisplayPort 1.2 specification. The PCH supports High-bandwidth Digital Content Protection for high definition content playback over digital interfaces. The PCH also integrates audio codecs for audio support over DP interfaces.

Up to three displays (DP1, DP2, DP3 & LVDS) can be used simultaneously and be used to implement independent or cloned display configuration. PCIe cards can be used to replace on-board graphics or in combination with on-board graphics.

Intel® HD Graphics 4600

Features of the Intel HD Graphics 4600 build into the i3, i5 and i7 processors, includes:
- High quality graphics engine supporting
  - 3 Symmetric Pipe Support
  - DirectX11.1 and OpenGL 4.x compliant and lower
  - Open CL 1.2 and lower
  - Core frequency of 350 - 1250 (Turbo) MHz
  - Memory Bandwidth up to 25.6 GB/s
  - Dynamic Video Memory Technology 5.0
  - DP 1.2 MST (Multi-Stream Transport)
  - PAVP
  - HDCP
  - Audio (Protected Content)
  - Full AVC/VC1/MPEG2 HW Decode
  - Full MVC HW Decode

- DP1, DP2 & DP3
  - 16/32bit colours in WQXGA 3840x2160 @ 60 Hz.
  - Max HDMI resolution 4096x2304 @ 24 Hz
  - DisplayPort standard 1.2

- LVDS
  - One or two pixels per clock, up to 1920x1200 24b bit colors.
  - 12V for backlight, up to 2.5A
  - 3.3V or 5V for panel power, up to 1.0A
  - PWM Brightness/Dimming
  - VESA and JEIDA color coding

Intel® HD Graphics 5200

The Intel Core i7-4860EQ support Intel Iris™ Pro graphics 5200 is almost the same as HD Graphics 4600, but it has 40 execution units instead of 20 units and also embedded DRAM (L4 cache is added).

3-displays Configurations:

Display1	Display2	Display3	Max resolution @60 Hz		
			Display 1	Display2	Display3
LVDS	DP	DP	1920x1200	3840x2160	3840x2160
LVDS	HDMI	DP	1920x1200	2560x1600	3840x2160
LVDS	HDMI	HDMI	1920x1200	2560x1600	2560x1600
LVDS	HDMI	DVI	1920x1200	2560x1600	1920x1200
LVDS	DVI	DP	1920x1200	1920x1200	3840x2160
LVDS	DVI	DP	1920x1200	1920x1200	3840x2160
HDMI	HDMI	DP	2560x1600	2560x1600	3840x2160
HDMI	DVI	DP	2560x1600	1920x1200	3840x2160
DVI	DVI	DP	1920x1200	1920x1200	3840x2160
DP	DP	DP	3840x2160	3840x2160	3840x2160
HDMI	HDMI	HDMI	Not allowed		
HDMI	HDMI	DVI			
HDMI	DVI	DVI			
DVI	DVI	DVI			

By DVI and HDMI means using "DP to DVI passive adapter" and "DP to HDMI passive adapter" respectively.

If using "Active adapter" it will be same as "DP" in above table.

DP Adapters

Use of DP Adapter Converters (3rd party accessories) can provide HDMI, DVI or VGA panel support.

The Kontron DP to VGA is the only active Adapter, so that both Kontron DP to HDMI and DP to DMI are passive adapters. The DP to HDMI supports the HDMI 1.4a specification including audio codec.

DP to VGA   DP to HDMI   DP to DVI
PN 1045-5779   PN 1045-5781   PN 1045-5780

Cable DP Extender cable 200mm
 PN1051-7619

For alle the above adapter's the maximum resolution is: 1920x1200. Extension cable available:

Alternative adapters with integrated cable are available:
KAB-ADAPT-DP-VGA, KAB-ADAPT-DP-HDMI and KAB-ADAPT-DP-DVI.

3.6   Power Specification

In order to ensure safe operation of the board, the ATX+12V power supply must monitor the supply voltage and shut down if the supplies are out of range – refer to the actual power supply specification. Please note, In order to keep the power consumption to a minimal level, boards do not implement a guaranteed minimum load. In some cases, this can lead to compatibility problems with ATX power supplies, which require a minimum load to stay in regulation. The KTQM87 board must be powered through the ATX+12V-4p (4-pole) and the ATX+12V-24p (24-pole) connectors using standard ATX power supply.

ATX12V supply: Both ATX+12V-4p connector and ATX+12V-24p connector must be used in according to the ATX12V PSU standard.

Warning: Hot Plugging power supply is not supported. Hot plugging might damage the board.

The requirements to the supply voltages are as follows:

Supply	Min	Max	Note
VCC3.3	3.135V	3.465V	Should be ±5% for compliance with the ATX specification
Vcc	4.75V	5.25V	Should be ±5% for compliance with the ATX specification. Should be +5/ -0% to meet the USB standard.
+12V	11.4V	12.6V	Should be ±5% for compliance with the ATX specification
−12V	−13.2V	−10.8V	Should be ±10% for compliance with the ATX specification
-5V	-5,50V	-4.5V	Not required for the KTQM87 boards
5VSB	4.75V	5.25V	Should be ±5% for compliance with the ATX specification

Note: -12V is only used for COM ports (COM1 and COM2).

Notice: If there is an unintentional voltage drop in the electrical mains power supply for longer than the specified holdup time (brownout), then all supply voltages should be shut down and remain in the off state long enough to allow internal voltages to discharge sufficiently. Failure to observe this off state time means that parts of the product or attached peripherals may work incorrectly or suffer a reduction of MTBF.

The minimum off state time, to allow internal voltages to discharge, depends on the implemented PSU model and additional electrical factors. To determine the required off state time, each case must be considered individually.

For more information, contact Kontron Support.

Power Consumption

Static Power Consumption examples of the total system power of different boards in different configurations (Low Power Setup, High Power Setup) are given within this chapter.

For each configuration the power consumptions result are listed in 5 tables:

1. Windows 7 Idle
2. Windows 7 3Dmark 2006
3. Windows 7 Intel TAT, 100% on all CPU cores and GFX
4. Windows 7 S3 (Sleep)
5. Windows 7 S5 (Shutdown)

The principal test system and test equipment used

1. Fluke 289
2. Fluke 179
3. ATX rail switch
Note: Power consumption of PSU (power loss), Monitor and HDD are not included.

KTQM87/mITX Low Power Setup:
Standard system configuration equipped with Internal graphics, 1x SATA disks, Intel i7-4700EQ CPU, 1x DIMM (4GB Module), DP Monitor, PS2 Keyboard & Mouse,1x 16GB USB 3.0 Stick, 12V active cooler, 400W ATX PSU.

KTQM87/mITX High Power Setup:
Standard system configuration equipped with PCIe x16 graphics card, mSATA 32GB, 4x SATA disks, Intel i7-4700EQ CPU, 2x DIMM (4GB Modules), DP Monitor, PS2 Keyboard & Mouse, 2x 16GB USB 3.0 Sticks, 2x 16GB USB 2.0 Sticks, 12V active cooler, 400W ATX PSU.

KTQM87/mITX Low Power Setup results:

Windows 7 – Idle			
Supply	Voltage / [V]	Current draw/ [mA]	Power consumption/ [W]
+12V	12.3	147	1.81
+12V_P4	12.3	305	3.75

5   Connector Definition

The following sections provide pin definitions and detailed description of all on-board connectors.

The connector definitions follow the following notation:

Column name	Description
Pin	Shows the pin-numbers in the connector. The graphical layout of the connector definition tables is made similar to the physical connectors.
Signal	The mnemonic name of the signal at the current pin. The notation "XX#" states that the signal "XX" is active low.
Type	AI: Analogue Input. AO: Analogue Output. I: Input, TTL compatible if nothing else stated. IO: Input / Output. TTL compatible if nothing else stated. IOT: Bi-directional tristate IO pin. IS: Schmitt-trigger input, TTL compatible. IOC: Input / open-collector Output, TTL compatible. IOD: Input / Output, CMOS level Schmitt-triggered. (Open drain output) NC: Pin not connected. O: Output, TTL compatible. OC: Output, open-collector or open-drain, TTL compatible. OT: Output with tri-state capability, TTL compatible. LVDS: Low Voltage Differential Signal. PWR: Power supply or ground reference pins.
	Ioh: Typical current in mA flowing out of an output pin through a grounded load, while the output voltage is > 2.4 V DC (if nothing else stated). Iol: Typical current in mA flowing into an output pin from a VCC connected load, while the output voltage is < 0.4 V DC (if nothing else stated).
Pull U/D	On-board pull-up or pull-down resistors on input pins or open-collector output pins.
Note	Special remarks concerning the signal.

The abbreviation *TBD* is used for specifications which are not available yet or which are not sufficiently specified by the component vendors.

6   IO-Area Connectors

6.1   DP Connectors DP1, DP2, DP3 (J24, J22, J23)

The DP (DisplayPort) connectors are based on standard DP type Foxconn 3VD51203-H7JJ-7H or similar.
Pin	Signal	Description	Type	Note
1	Lane 0 (p)		LVDS	
2	GND		PWR	
3	Lane 0 (n)		LVDS	
4	Lane 1 (p)		LVDS	
5	GND		PWR	
6	Lane 1 (n)		LVDS	
7	Lane 2 (p)		LVDS	
8	GND		PWR	
9	Lane 2 (n)		LVDS	
10	Lane 3 (p)		LVDS	
11	GND		PWR	
12	Lane 3 (n)		LVDS	
13	Config1	Aux or DDC selection	I	Internally pull down (1Mohm). Aux channel on pin 15/17 selected as default (when NC) DDC channel on pin 15/17, If HDMI adapter used (3.3V)
14	Config2	(Not used)	O	Internally connected to GND
15	Aux Ch (p)	Aux Channel (+) or DDC Clk		AUX (+) channel used by DP DDC Clk used by HDMI
16	GND		PWR	
17	Aux Ch (n)	Aux Channel (-) or DDC Data		AUX (-) channel used by DP DDC Data used by HDMI
18	Hot Plug		I	Internally pull down (100Kohm).
19	Return		PWR	Same as GND
20	3.3V		PWR	Fused by 1.5A resetable PTC fuse.

6.2   Ethernet Connectors

The KTQM87 supports two channels of 10/100/1000Mb Ethernet, one (LAN1) is based on Intel® Clarkville i218LM Gigabit PHY with AMT 9.0 support and one other controller (LAN2) are based on Intel® Pearsonville i218AT PCI Express controller.

In order to achieve the specified performance of the Ethernet port, Category 5 twisted pair cables must be used with 10/100MB and Category 5E, 6 or 6E with 1Gb LAN networks.

The signals for the Ethernet ports are as follows:

Signal	Description
MDI[0]+ / MDI[0]-	In MDI mode, this is the first pair in 1000Base-T, i.e. the BI_DA+/- pair, and is the transmit pair in 10Base-T and 100Base-TX. In MDI crossover mode, this pair acts as the BI_DB+/- pair, and is the receive pair in 10Base-T and 100Base-TX.
MDI[1]+ / MDI[1]-	In MDI mode, this is the second pair in 1000Base-T, i.e. the BI_DB+/- pair, and is the receive pair in 10Base-T and 100Base-TX. In MDI crossover mode, this pair acts as the BI_DA+/- pair, and is the transmit pair in 10Base-T and 100Base-TX.
MDI[2]+ / MDI[2]-	In MDI mode, this is the third pair in 1000Base-T, i.e. the BI_DC+/- pair. In MDI crossover mode, this pair acts as the BI_DD+/- pair.
MDI[3]+ / MDI[3]-	In MDI mode, this is the fourth pair in 1000Base-T, i.e. the BI_DD+/- pair. In MDI crossover mode, this pair acts as the BI_DC+/- pair.

Note: MDI = Media Dependent Interface.

Ethernet LAN1 (connector J9) is mounted together with USB Ports 10 and 11.
Ethernet LAN2 (connector J10) is mounted together with USB Ports 4 and 5.

The pinout of the RJ45 connectors is as follows:

Signal	PIN	Type	Ioh/Iol	Note
MDI0+				
MDI0-				
MDI1+				
MDI2+				
MDI2-				
MDI1-				
MDI3+				
MDI3-				
Flashing => communication		On => 1GB link		
	8 7 6 5 4 3 2 1			

6.3   USB Connectors (IO Area)

The KTQM87 board contains a EHCI (Enhanced Host Controller Interface) and a XHCI (Extensible Host Controller Interface). The EHCI controller supports eight USB 2.0 ports allowing data transfers up to 480Mb/s. The XHCI controller supports up to six USB 3.0 ports allowing data transfers up to 5Gb/s. Four of the USB 3.0 ports are shared with four of the USB 2.0 ports (USB0 – USB3).

Note: Not all USB 2.0 and USB 3.0 ports are physically connected to the board.

Legacy Keyboard/Mouse and wakeup from sleep states are supported. Over-current detection on all USB ports is supported. The following USB connectors are available in the IO Area.

USB 2.0/3.0 Port 0, 1, 2 & 3 are supplied on the combined quad USB connector (J35).
USB 2.0 Port 4, 5 are supplied on the combined 2xUSB and LAN connector (J10).
USB 2.0 Port 10, 11 are supplied on the combined 2xUSB and LAN connector (J9).

For USB2.0 cabling it is required to use only HiSpeed USB cable, specified in USB2.0 standard:
For USB3.0 cabling it is required to use only HiSpeed USB cable, specified in USB3.0 standard:
USB Connector J35 (USB0, 1, 2 & 3)

The quad USB connector J35, Ports 0, 1, 2 and 3 supports USB3.0/USB2.0.

Note	Type	Signal	PIN	Signal	Type	Note
	IO	USB3-	USB3+		IO	
1	PWR	5V/SB5V	1 2 3 4	GND	PWR	
	IO	RX2-	5 6 7 8 9	TX2+	IO	
	IO	RX1+		TX1-	IO	
	PWR		GND			
	IO	USB2-	USB2+		IO

	IO	RX1+		TX1-	IO	
	PWR		GND			
	IO	USB0-	USB0+		IO	
1	PWR	5V/SB5V	1 2 3 4	GND	PWR	
	IO	RX0-	5 6 7 8 9	TX0+	IO	
	IO	RX0+		TX0-	IO	
	PWR		GND			

Signal	Description
USBn+ USBn- RXn+ RXn- TXn+ TXn- (n= 0,1,2,3)	Differential pair works as serial differential receive/transmit data lines.
5V/SB5V	5V supply for external devices. SB5V is supplied during power-down to allow wakeup on USB device activity. Protected by resettable 2A fuse covering both USB ports.

USB 10 & 11 (J9)

The USB ports 10 and 11 supports USB2.0, are located in the stacked rear IO connectors J9 with LAN1.

Note	Type	Signal	PIN				Signal	Type	Note
	IO		USB10-		USB10+			IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	PWR		GND						
	IO		USB11-		USB11+			IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	PWR		GND						

Signal	Description
USB10+ USB10- USB11+ USB11-	Differential pair works as serial differential receive/transmit data lines.
5V/SB5V	5V supply for external devices. SB5V is supplied during power-down to allow wakeup on USB device activity. Protected by resettable 2A fuse covering both USB ports.

USB 4&5 (J10)

The USB ports 4 and 5 supports USB2.0, are located in the stacked rear IO connectors J10 with LAN2.

Note	Type	Signal	PIN				Signal	Type	Note
	IO		USB4-		USB4+			IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	PWR		GND						
	IO		USB5-		USB5+			IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	PWR		GND						

Signal	Description
USB4+ USB4- USB5+ USB5-	Differential pair works as serial differential receive/transmit data lines.
5V/SB5V	5V supply for external devices. SB5V is supplied during power-down to allow wakeup on USB device activity. Protected by resettable 2A fuse covering both USB ports.

6.4   Audio Jack Connector Stack (J16)

The on-board Audio circuit implements up to 8 Channel High Definition Audio via SPDIF-Out connector, see SPDIF-Out (J33) description.

Interface is based on UAA (Universal Audio Architecture), featuring five 24-bit stereo DACs and three 20-bit stereo ADCs. The Following Audio connector is available in IO Area.

Audio Speakers, Line-in and Microphone are available in a stacked audiojack connector:

		Signal	Type	Note
TIP		LINE1-IN-L	IA	$1.0V_{RMS}$, 30kΩ
RING		LINE1-IN-R	IA	$1.0V_{RMS}$, 30kΩ
SLEEVE		GND	PWR	
TIP		OUT-L	OA	For headphone, max $1.6V_{RMS}$
RING		OUT-R	OA	For headphone, max $1.6V_{RMS}$
SLEEVE		GND	PWR	
TIP		MIC1-L	IA	$1.0V_{RMS}$, 30kΩ
RING		MIC1-R	IA	$1.0V_{RMS}$, 30kΩ
SLEEVE		GND	PWR	

Signal	Description	Note
LINE1-IN-L	Line In signal Left	
LINE1-IN-R	Line In signal Right	
OUT-L	Speaker Out Left	Shared with J34 pin header connector
OUT-R	Speaker Out Right	Shared with J34 pin header connector
MIC1-L	Microphone In Left	
MIC1-R	Microphone In Right	

7   Internal Connectors

7.1   Power Connector (ATX+12V-24p) (J20)

The KTQM87 boards are designed to be supplied from a standard ATX (or BTX) power supply. Use of BTX supply is not required for operation, but may be required to drive high-power PCIe cards.

> ⚠ **Warning:** Hot plugging any of the two power connectors is not allowed. Hot plugging might damage the board. In other words, turn off main supply etc. to makesure all the power lines (+12V, 5V, SB5V, 3.3V, -5V, -12V) are turned off when connecting to the motherboard.

> ⚠ **Important:** The ATX 12V specification does not clearly state a requirement for the ramp-up of the 5V standby voltage (SB5V). However, Kontron strongly recommends to use only PSUs where the 5V Standby (SB5V) ramp up follows the same rules as listed for +5VDC.
> This should ensure that the board behaves properly, in particular when powering up without or with a weak/empty battery.

ATX+12V-24p Power Connector:

Note	Type	Signal	PIN		Signal	Type	Note
	PWR	3V3	12	24	GND	PWR	
	PWR	+12V	11	23	5V	PWR	
	PWR	+12V	10	22	5V	PWR	
	PWR	SB5V	9	21	5V	PWR	
	I	P_OK	8	20	-5V	PWR	1
	PWR	GND	7	19	GND	PWR	
	PWR	5V	6	18	GND	PWR	
	PWR	GND	5	17	GND	PWR	
	PWR	5V	4	16	PSON#	OC	
	PWR	GND	3	15	GND	PWR	
	PWR	3V3	2	14	-12V	PWR	
	PWR	3V3	1	13	3V3	PWR	

See chapter "Power Consumption" regarding input tolerances on 3.3V, 5V, SB5V, +12 and -12V (also refer to ATX specification version 2.2).

ATX+12V-4p Power Connector (J21):

Note	Type	Signal	PIN		Signal	Type	Note
	PWR	GND	2	4	+12V	PWR	1
	PWR	GND	1	3	+12V	PWR	1

Note 1: Use of the ATX+12V-4p in Power Connector is required for operation of KTQM87.
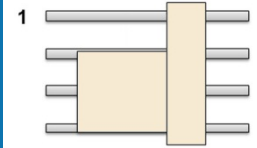

Signal	Description
P_OK	P_OK is power good signal driven by the ATX Power Supply and indicating that the +5VDC and +3.3VDC outputs are above the undervoltage thresholds. The recommended electrical and timing characteristics of the P_OK (PWR_OK) signal are provided in the *ATX12V Power SupplyDesign Guide*. It is strongly recommended to use an ATX or BTX supply, in order to provide supervision of the 5V and 3V3 supplies. These supplies are not supervised on-board.
PS_ON#	Active low open drain signal from the board to the power supply to turn on the power supply outputs. Signal must be pulled high by the power supply.

7.2   Fan Connectors (J28 and J29)
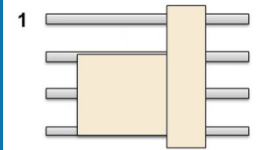

The FAN1SYS (J28) can be used to power, control and monitor a fan for chassis ventilation etc.
The FANCPU (J29) is used for the connection of the FAN for the CPU.

The 4pin header is recommended to be used for driving 4-wire type Fan in order to implement FAN speed control. 3-wire Fan support is also possible, but no fan speed control is integrated.

4-pin Mode:

Header	Pin	Signal	Description	Type
	1	PWM	PWM output	0-3.3
	2	TACHO	Tacho signal	I
	3	12V	Power +12V	PWR
	4	GND	Ground	PWR

3-pin Mode:

Header	Pin	Signal	Description	Type
	1		Not used	
	2	TACHO	Tacho signal	I
	3	12V	Power +12V	PWR
	4	GND	Ground	PWR

Signal	Description
PWM	PWM output signal for FAN speed control.
TACHO	Tacho input signal from the fan, for rotation speed supervision RPM (Rotation Per Minute). The signal shall be generated by an open collector transistor or similar. Onboard is a pull-up resistor 4K7 to +12V. The signal has to be pulsed and onboard circuit is prepared for two pulses per rotation.
12V	+12V supply for fan. A maximum of 2000mA can be supplied from this pin.
GND	Power Supply GND signal

7.3   PS/2 Keyboard and Mouse connector (KBDMSE) (J26)

Attachment of a PS/2 keyboard/mouse can be done through the pinrow connector KBDMSE (J26).
Both interfaces utilize open-drain signalling with on-board pull-up.

The PS/2 mouse and keyboard is supplied from SB5V when in standby mode in order to enable keyboard or mouse activity to bring the system out from power saving states. The supply is provided through a 1.1A resettable fuse.

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	KBDCLK	IOD	/14mA	2K7	
2	KBDDAT	IOD	/14mA	2K7	
3	MSCLK	IOD	/14mA	2K7	
4	MSDAT	IOD	/14mA	2K7	
5	5V/SB5V	PWR	-	-	
6	GND	PWR	-	-	

Signal Description – Keyboard & and mouse Connector (KBDMSE).

Signal	Description
MSCLK	Bi-directional clock signal used to strobe data/commands from/to the PS/2 mouse.
MSDAT	Bi-directional serial data line used to transfer data from or commands to the PS/2 mouse.
KDBCLK	Bi-directional clock signal used to strobe data/commands from/to the PC-AT keyboard.
KBDDAT	Bi-directional serial data line used to transfer data from or commands to the PC-AT keyboard.

Available cable kit:
PN 1053-2384 Bracket Cable 6-Pin to PS2-Kbd-Mse

7.4   SATA (Serial ATA) Disk interface

The KTQM87 has an integrated SATA Host controller (PCH in the QM87 chipset) that supports independent DMA operation on six ports. One device can be installed on each port for a maximum of six SATA devices via four SATA connectors and two mSATA connector. A point-to-point interface (SATA cable) is used for host to device connections. Data transfer rates of up to 6.0/3.0/1.5Gb/s are supported on all SATA ports.

Note: Before installing OS on a SATA drive make sure the drive is not a former member of a RAID system. If so some hidden data on the disk has to be erased. To do this, connect two SATA drives and select RAID in BIOS. Save settings and select <Ctrl> <I> while booting to enter the RAID setup menu. Now the hidden RAID data will be erased from the selected SATA drive.

Supported SATA features:
>   2 to 4-drive RAID 0 (data striping)
>   2-drive RAID 1 (data mirroring)
>   3 to 4-drive RAID 5 (block-level striping with parity).
>   4-drive RAID 10 (data striping and mirroring)
>   2 to 4-drive matrix RAID, different parts of a single drive can be assigned to different RAID devices.
>   AHCI (Advanced Host Controller Interface)
>   NCQ (Native Command Queuing). NCQ is for faster data access.
>   Swap bay support (not supported on mSATA)
>   Intel® Rapid Recover Technology
>   2 – 256TB volume (Data volumes only)
>   Capacity expansion
>   TRIM in Windows 7 (in AHCI and RAID mode for drives not part of a RAID volume). (TRIM is for SSD data garbage handling).

SATA0, SATA1, SATA2 and SATA3 connector pinning:

PIN	Signal	Type	Ioh/Iol	Note
1	GND	PWR	-	
2	SATA* TX+			
3	SATA* TX-			
4	GND	PWR	-	
5	SATA* RX-			
6	SATA* RX+			
7	GND	PWR	-	

Signal	Description
SATA* RX+ / RX-	Host transmitter differential signal pair
SATA* TX+ / TX-	Host receiver differential signal pair

"*" specifies 0, 2, 3, 4, 5 depending on SATA port.

Available cable kit:

PN 821035 Cable SATA 500mm

7.5   USB Connectors (internal)

The following USB2.0 ports are available on Internal Pinrows:
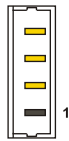

USB2.0 Port 8 and 9 are supplied on the internal FRONTPNL connector (J12).
See "Front Panel Header" description.

USB2.0 Port 12 and 13 are supplied on the internal mPCIe connectors (J14 and J13) witch have included mSATA and USB connections. See "PCIe Connectors" description.

7.6   Speaker connector (J34)

The headphone interface is available through the connector J34 (4 pins). These outputs are shared with the Speaker Audio Jack connector (green).
Up to 100 dB Signal-to-Noise Ratio (SNR).

Header	Pin	Signal	Type
	4	HPOUT-R	AO
	3	GND	PWR
	2	HPOUT-L	AO
	1	GND	PWR

7.7   SPDIF-Out (J33)

The digital audio interface (electrical SPDIF-Out) is available through the 2 pin connector J33 and can be used to implement 8 (7.1) Channel High Definition Audio.

Circuit is based on high fidelity 8-channel HD audio codec which is compatible with Intel HD Audio specification and supports stereo 24-bit resolution and up to 192 kHz sample rate for DACs/ADCs.
Up to 90 dB Signal-to-Noise Ratio (SNR).

16/20/24-bit S/PDIF TX Outputs supporting 48K/96K/44.1K/88.2 KHz sample rate

Header	Pin	Signal	Type
	2	GND	PWR
	1	SPDIF_OUT	O-3.3

7.8   Front Panel Connector (FRONTPNL) (J12)

Signal	Description
USB8_5V & USB9_5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by active power switch 1A fuse for each USB ports.
USB8+/USB8-	Universal Serial Bus Port 8 Differentials: Bus Data/Address/Command Bus.
USB9+/USB9-	Universal Serial Bus Port 11 Differentials: Bus Data/Address/Command Bus.
+5V	Maximum load per pin is 1A (using IDC connector) or 2A (using crimp terminals).
SATA_LED#	SATA Activity LED (active low signal). 3V3 output when passive.
SUS_LED	Suspend Mode LED (active high signal). Output 3.3V via 470Ω.
PWRBTN_IN#	Power Button In. Toggle this signal low to start the ATX / BTX PSU and boot the board.
RSTIN#	Reset Input. When pulled low for a minimum 16ms, the reset process will be initiated. The reset process continues even though the Reset Input is kept low.
LINE2	Line2 is second stereo Line signals
MIC2	MIC2 is second stereo microphone input.
SB3V3	Standby 3.3V voltage
AGND	Analogue Ground for Audio

Available cable kit:
PN 821042 Cable Front Panel Open-End, 300 mm

7.9   Serial COM1 – COM2 Ports (J19, J18)

Two RS232 serial ports are available on the KTQM87.
The typical definition of the signals in the COM ports is as follows:

Signal	Description
TxD	Transmitted Data, sends data to the communications link. The signal is set to the marking state (-12V) on hardware reset when the transmitter is empty or when loop mode operation is initiated.
RxD	Received Data, receives data from the communications link.
DTR	Data Terminal Ready, indicates to the modem etc. that the on-board UART is ready to establish a communication link.
DSR	Data Set Ready, indicates that the modem etc. is ready to establish a communications link.
RTS	Request To Send, indicates to the modem etc. that the on-board UART is ready to exchange data.
CTS	Clear To Send, indicates that the modem or data set is ready to exchange data.
DCD	Data Carrier Detect, indicates that the modem or data set has detected the data carrier.
RI	Ring Indicator, indicates that the modem has received a ringing signal from the telephone line.

The pinout of Serial ports COM1 (J19), COM2 (J18)

Note	Ioh/Iol	Type	Signal	PIN		Signal	Type	Ioh/Iol	Note
	-	I	DCD	1	2	DSR	I	-	
	-	I	RxD	3	4	RTS	O		
		O	TxD	5	6	CTS	I	-	
		O	DTR	7	8	RI	I	-	
	-	PWR	GND	9	10	5V	PWR	-	1

Note 1:   The COM1, COM2 5V supply is fused with common 1.5A resettable fuse.

DB9 adapter cables (PN 821016 200mm long and 821017 100mm long) are available for implementing standard COM ports on chassis.

Available cable kit (DB9 adapter cables):
PN 821017 - 100 mm or PN 821016 - 200 mm

7.10 LVDS Flat Panel Connector (J31)

The LVDS connector is based on 40 pole connector type Don Connex C44-40BSB1-G.

Note	Type	Signal	PIN		Signal	Type	Note

	LVDS	LVDS BCLK-	35	36	LVDS BCLK+	LVDS	
	LVDS	LVDS B3-	37	38	LVDS B3+	LVDS	
Max. 0.5A	PWR	GND	39	40	GND	PWR	Max. 0.5A

Note: The KTQM87 on-board LVDS connector supports single and dual channel, 18/24bit SPWG panels up to a resolution of 1600x1200 or 1920x1080 and with limited frame rate up to 1920x1200.

Signal Description – LVDS Flat Panel Connector:

Signal	Description
LVDS A0..A3	LVDS A Channel data
LVDS ACLK	LVDS A Channel clock
LVDS B0..B3	LVDS B Channel data
LVDS BCLK	LVDS B Channel clock
BKLTCTL	Backlight control (1), PWM signal to implement voltage in the range 0-3.3V
BKLTEN#	Backlight Enable signal (active low) (2)
VDD ENABLE	Output Display Enable.
LCDVCC	VCC supply to the display. 5V or 3.3V (1A Max.) selected in BIOS setup menu. Power sequencing depends on LVDS panel selection. (Shared with eDP connector)
DDC CLK	DDC Channel Clock

Notes: Windows API will be available to operate the BKLTCTL signal. Some Inverters have a limited voltage range 0- 2.5V for this signal: If voltage is > 2.5V the Inverter might latch up. Some Inverters generates noise on the BKLTCTL signal, causing the LVDS transmission to fail (corrupted picture on the display). By adding a 1Kohm resistor in series with this signal, mounted at the Inverter end of the cable kit, the noise is limited and the picture is stable.
If the Backlight Enable is required to be active high then, check the following BIOS Chipset setting: Backlight Signal Inversion = Enabled.

7.11　Feature Connector (J27)

Notes: 1. Pull-up to +3V3Dual (+3V3 or SB3V3). **2**. Pull-up to on-board Battery. **3**. Pull-up to +3V3.

Signal	Description
CASE_OPEN#	CASE OPEN, used to detect if the system case has been opened. This signal's status is readable, so it may be used like a GPI when the Intruder switch is not required.
SMBC	SMBus Clock signal
SMBD	SMBus Data signal
S3#	S3 sleep mode, active low output, optionally used to deactivate external system.
S5#	S5 sleep mode, active low output, optionally used to deactivate external system.
PWR_OK	PoWeR OK, signal is high if no power failures are detected. (This is not the same as the P_OK signal generated by ATX PSU).
EXT_BAT	(EXTernal BATtery) option for connecting + terminal of an external primary cell battery (2.5 - 3.47 V) (– terminal connected to GND). The external battery is protected against charging and can be used with/without the on-board battery installed.
SB3V3	Max. load is 0.75A (1.5A < 1 sec.)
SB5V	StandBy +5V supply.

Signal	Description
GPIO0..17	General Purpose Inputs / Output. These Signals may be controlled or monitored through the use of the KT-API-V2 (Application Programming Interface).
EGCLK	Extend GPIO Clock signal
EGAD	Extend GPIO Address Data signal
EGCS#	Extend GPIO Chip Select signal, active low
TMA0	Timer Output
+12V	Max. load is 0.75A (1.5A < 1 sec.)

The GPIO's are controlled via the ITE IT8516F Embedded Controller. Each GPIO has 100pF to ground, clamping Diode to 3V3 and has multiplexed functionality. Some pins can be DAC (Digital to Analogue Converter output), PWM (Pulse Width Modulated signal output), ADC (Analogue to Digital Converter input), TMRI (Timer Counter Input), WUI (Wake Up Input), RI (Ring Indicator Input) or some special function.

Signal	IT8516F pin name	Type	Description
GPIO0	DAC0/GPJ0	AO/IOS	
GPIO1	DAC1/GPJ1	AO/IOS	
GPIO2	DAC2/GPJ2	AO/IOS	
GPIO3	DAC3/GPJ3	AO/IOS	
GPIO4	PWM2/GPA2	O8/IOS	
GPIO5	PWM3/GPA3	O8/IOS	
GPIO6	PWM4/GPA4	O8/IOS	
GPIO7	PWM5/GPA5	O8/IOS	
GPIO8	ADC0/GPIO	AI/IS	
GPIO9	ADC1/GPI1	AI/IS	
GPIO10	ADC2/GPI2	AI/IS	
GPIO11	ADC3/GPI3	AI/IS	
GPIO12	ADC4/WUI28/GPI4	AI/IS/IS	
GPIO13	RI1#/WUI0/GPD0	IS/IS/IOS	
GPIO14	RI2#/WUI1/GPD1	IS/IS/IOS	
GPIO15	TMRI0/WUI2/GPC4	IS/IS/IOS	
GPIO16	TMRI1/WUI3/GPC6	IS/IS/IOS	
GPIO17	L80HLAT/BA0/WUI24/GPE0	O4/O4/IS/IOS	

Available cable kit and Break-Out-Board:
PN 1052-5885 Cable, Feature 44pol 1 to1, 300mm
PN 820978 Feature BOB (Break-Out-Board)

7.12 "Load Default BIOS Settings" Jumper (J5)

The "Load Default BIOS Settings" Jumper (J5) can be used to recover from incorrect BIOS settings. As an example, an incorrect BIOS setting which causes the attached display not to turn on can be erased by this Jumper.

The Jumper has 3 positions: Pin 1-2, Pin2-3 (default position) and not mounted.

⚠ **Warning**

Don't leave the Jumper in position 1-2, otherwise if power is disconnected, the battery will fully deplete within a few weeks.

Jumper (in default position)

J5 pin1
J5		Description
pin1-2	pin2-3	
X	-	Don't use. (Board do not boot with jumper in this position)
-	X	Default position
-	-	Load Default BIOS Settings and erase Password

To Load Default BIOS Settings and erase password:

1. Turn off power completely (no SB5V).
2. Remove the Jumper completely from J5.
3. Turn on power.
4. Motherboard beeps fast 20 times and turns off.
5. Turn off power.
6. Move the Jumper back to position 2-3 (default position).
7. Turn on power, use the Power On Button (PWRBTN_IN#) if required to boot.

Motherboard might automatically reboot a few times. Wait until booting is completed.

7.13 Always On Jumper setting (J36)

If the Jumper is installed in the (J36) Always On position, the board will automatically power up, when the external power supply is switched ON. This action is independent of the settings in the BIOS setup.

However, if the Jumper is in the (J36) Default position or is not mounted, the settings in the BIOS setup controls if the board automatically powers up.

For more information regarding the (J36) Always ON settings, refer to the following table.

Jumper in Default position (pin 2&3)

J36 pin1
| J36 | | State After G3 | | Always ON | Comment |
Pin 1-2	Pin 2-3	State S0	State S5		
X		X		Enabled	Board powers on automatically, when the external power supply is switched ON.
X			X	Enabled	Board powers on automatically, when the external power supply is switched ON.
	X	X		Enabled	Board powers on automatically, when the external power supply is switched ON.
	X		X	Disabled	Activate the power on button (PWRBIN_IN#) to switch on the board.
-	-	X		Enabled	Board powers on automatically, when the external power supply is switched ON.
-	-		X	Disabled	Activate the power on button (PWRBIN_IN#) to switch on the board.

7.14   SPI Connector (J32)

The SPI Connector is normally not used. If however a SPI BIOS is connected via the SPI Connector then the board will attempt to boot from it.

Note	Pull U/D	Ioh/Iol	Type	Signal	PIN		Signal	Type	Ioh/Iol	Pull U/D	Note
1	-			CLK	1	2	SB3V3	PWR	-	-	
	-		I	CS0#	3	4	ADDIN	IO		/10K

	-		IO	MISO	9	10	GND	PWR	-	-	
	1K		IO	SPI_IO2_#WP	11	12	SPI_IO3_#HOLD	IO		1K	

Signal	Description
CLK	Serial Clock
SB3V3	3.3V Standby Voltage power line. Normally output power, but when Motherboard is turned off then the on-board SPI Flash can be 3.3V power sourced via this pin.
CS0#	CS0# Chip Select 0, active low.
ADDIN	ADDIN input signal must be NC.
MOSI	Master Output, Slave Input.
ISOLATE#	The ISOLATE# input, active low, is normally NC, but must be connected to GND when programming the SPI flash. Power Supply to the Motherboard must be turned off when loading SPI flash. The pull up resistor is connected via diode to 5VSB.
MISO	Master Input, Slave Output
SPI_IO2_#WP	SPI Data I/O: A bidirectional signal used to support Dual IO Fast Read, Quad IO Fast Read and Quad Output Fast Read modes. The signal is not used in Dual Output Fast Read mode.
SPI_IO3_#HOLD	SPI Data I/O: A bidirectional signal used to support Dual IO Fast Read, Quad IO Fast Read and Quad Output Fast Read modes. The signal is not used in Dual Output Fast Read mode.

7.15   ccTalk Connector (J25)

The ccTalk interface uses a 4-pin connector identical to the Fan connectors.

> ⚠️ **Warning:** Caution must be exercised to avoid inserting a CcTalk header into a FAN connector as this might result in damage to the CcTalk device, motherboard or both!

Serial protocol used in money transaction industry. Peripherals such as coin acceptors, bill validators, automatic payment equipment such as transportation, ticketing, payphones, amusement machines and retail cash management use ccTalk to talk to the host controller.

ccTalk transfer asynchronously at 4800 -9600 baud, character frames via single wire bidirectional communication at TTL level. It has 'multi-drop' support for devices all having unique addresses. It can easily expandable command interface and has some DES encryption. No licensing.

Header	Pin	Signal	Description	Type
	1	VCC5	Power +5V	PWR
	2	N.C.	Not connected	NC
	3	GND	Ground	PWR
	4	DATA	Serial data line (RXD/TXD)	IO

7.16   LPC Connector (J30)

The LPC connector is in general unsupported. Only under special circumstances may the LPC interface be of interest.

Note	Pull U/D	Ioh/Iol	Type	Signal	PIN		Signal	Type	Ioh/Iol	Pull U/D	Note

				SUS_STAT#	19	20	TPM_DRQ#0				

8   Slot Connectors (PCIe, miniPCIe)

8.1   PCIe Connectors

KTQM87 supports 1 xPCIe x16 (16-lane) PCI Express port, 2 x miniPCI Express with different options, one miniPCI Express ports (J14) with mSATA,USB2.0 and SIM-card Socket (J15) one miniPCI Express port (J13) with mSATA and USB2.0. The PCIex16 slot supports PEG Bifurcation 2x PCIex8 or 1x PCIe x8 + 2x PCIe x4, but need Riser Card with bifurcation functionality to work.

The 16-lane (x16) PCI Express (J8) (PCIe 2.0 and PCIe 3.0) port can be used for external PCI Express cards inclusive graphics card. Maximum theoretical bandwidth using 16 lanes is 16 GB/s.

PCI-Express x16 Connector (J8 PCIe x16)

MiniPCIe with mSATA/USB2.0 & SIM-card support (J14)

Slot J14 supports mPCIe or mSATA cards (uses SATA5 Port), USB2.0 and SIM-card socket (J15).
The SIM-card socket makes it possible to use a 2G/3G-wireless modem in this mPCIe slot.
The USB does support WAKE function.

* USB8/USB9 are located in FRONTPNL connector.

Note: More than one connector can be listed for each type of on-board connectors even though several types with same fit, form and function are approved and could be used as alternative. Please also notice that standard connectors like DP, PCIe, miniPCIe, Audio Jack, Ethernet and USB are not included in the list.

10 BIOS

The BIOS Setup is used to view and configure BIOS settings for the board. The BIOS Setup is accessed by pressing the <Del> -key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins.

The BIOS settings will be loaded automatically when loading "Restore Default" see "Save & Exit" menu. In this Users Guide the default settings are indicated by **bold**. Please notice that "Restore User Defaults" might have different set of default values.

```

Function	Selection	Description
NumLock:	**On** Off	Select Power-on state for NumLock.
Timeout	2 Note 1	Number of seconds that P.O.S.T will wait for the user input before booting.
CSM Support	No **Yes**	Compatibility Support Module that provides backward compatibility services for legacy BIOS services, like int10/int13, dependent OS.
Diagnostic Splash Screen	**Disabled** Enabled	If you select 'Enabled' the diagnostic splash screen always displays during boot. If you select 'Disabled' the diagnostic splash screen does not display unless you press HOTKEY during boot.
Diagnostic Summary Screen	**Disabled** Enabled	Display the diagnostic summary screen during boot.
BIOS Level USB	Disabled **Enabled**	Enable/Disable all all BIOS support for USB in order to reduce boot time. Note that this will prevent using a USB keyboard in setup or a USB biometric scanner such as a finger print reader to control access to setup, but does not prevent the operating system for supporting such hardware.
USB Legacy	Disabled **Enabled**	Enable/Disable USB BIOS SMM support for mouse, keyboard, mass storage, etc. in legacy operating systems such as DOS.
Console Redirection	**Disabled** Enabled	Enable/Disable Universal Console Redirection.
Allow Hotkey in S4 resume	Disabled **Enabled**	Enable hotkey detection when system resuming from Hibernate state.
UEFI Boot	**Disabled** Enabled	Enable the UEFI boot.
Legacy Boot	Disabled **Enabled**	Enable the Legacy boot.
Boot in Legacy Video Mode	**Disabled** Enabled	Enable to force the display adapter to switch the video mode to Text Mode 3 at the end of BIOS POST for non-UEFI boot mode (Legacy Boot). Some legacy software, such as DUET, requires that the BIOS explicitly enter text video mode prior to boot.
Load OPROM	All **On Demand**	Load all OPROMs or on demand according to the boot device.

Note 1: Use either digit keys to enter value (0 – 99) or +/- keys to increase/decrease value.

    FACP – PM Timer Flag Value      [Disabled]
    CPPC                            [Enabled]
    CPPC Platform Sci enable        [Enabled]
    Native PCI Express              [Enabled]

    F1    Help    ↑↓   Select Item    +/-     Change Values      F9    Setup Defaults
    Esc   Exit    ←→   Select Menu    Enter   Select ▶Sub-Menu   F10   Save and Exit
```

Function	Selection	Description
FACP – KTC S4 Flag Value	Disabled **Enabled**	Valid Only for ACPI. Controls the value for the RTC S4 flag in the FACP table.
APIC – IO APIC Mode	Disabled **Enabled**	This is valid only for WIN2000, Windows XP. A fresh install of OS must occur when APIC mode is enabled. The APIC table will be pointed to by the RSDT, the Local APIC will be initialized, and the proper enable bits are set in the PCH.
ALS Support	**Legacy** ACPI	Valid only for ACPI. Legacy = ALS support through the IGD INT10 function. ACPI = ALS support through an ACPI ALS driver.
EMA Support	**Disabled** Enabled	Valid only for ACPI. Controls the EMA device in an ACPI environment.
MEF Support	**Disabled** Enabled	Valid only for ACPI. Controls the Mobile East Fork feature support in an ACPI environment.
Enabled PTID	**Disabled** Enabled	Enable/Disable Power and Temperature Instrumentation Details.
FACP – PM Timer Flag Value	**Disabled** Enabled	Valid only for ACPI. Controls the PM Timer Flag Value in the FACP table.
CPPC	Disabled **Enabled**	ACPI 5.0 Collaborative Processor Performance Control. When CPPC is enabled, the newer ACPI 5.0 method for processor performance control will be used. When disabled, the older methods (P-State and T-State) will be used.
CPPC Platform Sci enable	Disabled **Enabled**	When enabled, the platform will generate a GPE/SCI upon CPPC command completion. If disabled, the OS must poll for command completion.
Native PCI Express	Disabled **Enabled**	Native PCI Express Enable/Disable

F1	Help	↑↓	Select Item	+/-	Change Values	F9 Setup Defaults
Esc	Exit	←→	Select Menu	Enter	Select ►Sub-Menu	F10 Save and Exit

Function	Selection	Description
Intel ® SpeedStep ™	Disabled **Enabled**	Enable processor performance states (P-States).
Boot Performance Mode	**Max Performance** Max Battery Auto	Select the performance state that the BIOS sets before OS handoff.
Turbo Mode	Disabled **Enabled**	Enable processor Turbo Mode. EMTTM must also be enabled.
Turbo Mode Power Limit Lock	**Disabled** Enabled	Enable/Disable Locking of turbo settings. When Enabled, TURBO_POWER_LIMIT MSR will be locked and a reset will be required to unlock the register.
Long Power Limit	**0**, 1,2,…200	Turbo Mode Long Duration Power Limit (aka Power Limit 1) in Watts. The value may vary from 0 to Fused Value. If the value is 0, the fused value will be programmed. A value greater than fused TDP value will not be programmed.

Function	Selection	Description
Long Power Limit Time	0,1… **28**,…55,56	Long Duration Time Window (aka Power Limit 1 Time) value in seconds. The value may vary from 0 to 56. Indicates the time window over which TDP value should be maintained. If the value is 0, the fused value will be programmed.
Short Power Limit	**0**, 1, … 32767	Turbo Mode Long Duration Power Limit (aka Power Limit 2) in Watts. The value may vary from 0 to Fused Value. If the value is 0, the fused value will be programmed. A value greater than fused TDP value will not be programmed.
Short Duration Turbo mode	Disabled **Enabled**	Enable Short Duration Turbo mode for processor.
Energy Efficient Enable	Disabled **Enabled**	Enable Energy Efficient for processor.
Configure TDP Boot Mode	**Nominal** Down Up Disabled	Configure TDP Mode as [Nominal] [Up] [Down] [Disabled] TDP selection. Disabled options will skip all cTDP boot configurations but dynamic cTDP can still work.
Lock TDP Setting	**Disabled** Enabled	Lock TDP in MSR_CONFIG_TDP_CONTROL
TDP Custom Setting	**Disabled** Enabled	Use TDP Custom Setting.
C-States	Disabled **Enabled**	Enable processor idle power saving states (C-States).
Extend C-States	Disabled **Enabled**	Enable C-State transitions to occur in combination with P-States.
C3-State	Disabled **Enabled**	Enable processor idle power saving C3 state.
C6-State	Disabled **Enabled**	Enable processor idle power saving C6 state.
C6 Latency	**Short** Long	Configure Short/Long Latency.
C7-State	**Disabled** Enabled	Enable processor idle power saving C7 state.
C7 Latency	Short **Long**	Configure Short/Long Latency.
C-State Auto Demotion	Disabled C1 C3 **C1 and C3**	Configure C-State Auto Demotion.
C-State UnDemotion	Disabled C1 C3 **C1 and C3**	Configure C-State Auto UnDemotion.
Package C State Demotion	**Disabled** Enabled	Enable/Disable Package C State Demotion.
Package C State UnDemotion	**Disabled** Enabled	Enable/Disable Package C State UnDemotion.
C State Pre-Wake	Disabled **Enabled**	Enable/Disable C State Pre-Wake.
Lake Tiny	**Disabled** Enabled	Lake Tiny Settings.

Function	Selection	Description
PEG0 – Gen X	**Auto** Gen1 Gen2 Gen3	Configure PEG0 B0:D1:F0 Speed.
PEG1 – Gen X	**Auto** Gen1 Gen2 Gen3	Configure PEG1 B0:D1:F1 Speed.
PEG2 – Gen X	**Auto** Gen1 Gen2 Gen3	Configure PEG2 B0:D1:F2 Speed.
Always Enable PEG	**Disabled** Enabled	Enable PEG.
PEG ASPM	Disabled L0S L1 L0S And L1 **Auto**	PEG ASPM Settings.
Program PCIe ASPM later than Oprom	**Disabled** Enabled	Enabled: PCIe ASPM will be programmed after OpROM. Disabled: PCIe ASPM will be programmed before OpROM
De-emphasis Control	-6 dB **-3.5 dB**	DeEmphasis control for PEG.
Swing Control	Reduced Half **Full**	Perform PEG Swing Control.
PEG Sample Calibrate	Disabled Enabled **Auto**	Enable/Disable PEG Sample Calibrate.
Gen3 Equalization	Disabled **Enabled**	Perform PEG Gen3 Equalization steps.
PEG Gen3 Equalization Phase2	**Disabled** Enabled	Enable/Disable PEG Gen3 Equalization Phase2.
Gen3 Root Port Preset	1,2,...**8**,...11	Root Port Preset value for Gen3 Equalization.
Gen3 Endpoint Preset	0,1,...**7**,...10	Endpoint Preset value for Gen3 Equalization.
Gen3 Endpoint Hint	0,1,**2**,...10	Endpoint Hint value for Gen3 Equalization.
Gen3 Eq Preset Search	Disabled **Enabled**	Perform PEG Gen3 SW Preset Search algorithm.
Always re-search Gen3 Eq Preset	**Disabled** Enabled	Always re-search PEG Gen3 Preset even it has been done once.
Allow PREST# GPIO Usage	Disabled **Enabled**	Enable/Disable GPIO-based resets to PEG endpoint(s) during margin search, if needed.
Preset Search Dwell Time	0,...**1000**, ...65535	PEG Gen3 Preset Search dwell time in [ms].
Timing Start Margin	4, ...**15**, ...255	The starting value [4...255] for the backward margin search.
Voltage Start Margin	4, ...**20**, ...255	The starting value [4...255] for the backward margin search.
Error Target	0,**1**, ...65535	The margin search error target value [1 ... 65535].
PEG RxCEM Loopback Mode	**Disabled** Enabled	Enable/Disable PEG RxCEM Loopback Mode.
PEG Gen3 RxCTLE Control	0, ...**8**, ...255	PEG Gen3 RxCTLE for Bundle0(Lane0, Lane1).

        System Temperature Ext Type     [Disabled]
        Fan Cruise Control              [Thermal]
        Fan Settings                    [50]
        Fan Min limit                   [    0]
        Fan Max limit                   [100]

        CPU Fan Speed                   [   2539 RPM]
        Fan Cruise Control              [Thermal]
        Fan Settings                    [50]
        Fan Min limit                   [    0]
        Fan Max limit                   [100]

        Watchdog Function               [    0]

    F1     Help     ↑↓    Select Item    +/-    Change Values        F9    Setup Defaults
    Esc    Exit     ←→    Select Menu    Enter  Select ►Sub-Menu      F10   Save and Exit
```

Note: *System Temperature* readout is the temperature measured by the selected sensor via *System Temperature Ext Type*. If disabled then onboard sensor (U79) is used.

Function	Selection	Description
System Temperature Ext Type	**Disabled** (Note 1) LM75 @ 0x90 OneWire @ GPIO16	Use external connected sensor instead of onboard.
Fan Cruise Control (Note 2)	Disabled Thermal Speed	Disabled = Full speed. Thermal: Regulate according to specified ºC. Speed: Regulate according to specified RPM.
Fan Settings	30 – 90 (note3) 1000 – 10000 (note4)	
Fan Min limit (Note 5)	0 (note6)	Minimum PWM %, can be used to make sure fan is always active. Make sure Min limit < Max limit.
Fan Max limit (Note 5)	100 (note6)	Maximum PWM %, can be used to limit the fan noise. Make sure Min limit < Max limit.
Watchdog Function	0 - 255 (note7)	0 = Disabled. Enter the service interval in seconds before system will reset.

Note 1: When not Disabled then the *System Temperature* readout will only be valid if the sensor is physically connected to the Feature connector.

Note 2: Three sets of settings (*Fan Cruise Control*, *Fan Settings*, *Fan Min limit*, *Fan Max limit*), one set for *System Fan* and one set for *CPU Fan*. The *Fan Cruise Control* is by default *Disabled* for *System Fan* and by default *Thermal* for CPU Fan.

Note 3: ºC (if *Fan Cruise Control* is *Thermal*) use either digit keys to enter value or +/- keys to increase/decrease value. Don't use mix of digit keys and +/- keys.

Note 4: RPM (if *Fan Cruise Control* is *Speed*) use either digit keys to enter value or +/- keys to increase/decrease value by 100. Don't use mix of digit keys and +/- keys.

Note 5: Only visible if *Fan Cruise Control* is *Thermal*.

Note6: Use number keys to enter value.

Note 7: Seconds, use digit keys to enter value. Value 0 means Watchdog is disabled. Refer to "KT-API-V2 User Manual" to control the Watchdog via API or refer to "KT-API-V2 User Manual DLL" how to control Watchdog via Windows DLL.

Function	Selection	Description
Automatic Thermal Reporting	Disabled **Enabled**	Configure _CRT, _PSV, and _AC0 automatically based on values recommended in BWG's Themal Reporting for Thermal Management settings. Set to Disabled for manual configuration.
Active Trip Point Lo Fan	15, 23,…**55**,…119	This value controls the temperature of the ACPI Active Trip Point – the point where the OS turns the processor fan on low.
Passive TC1 Value	**1**,2, …16	This value sets the TC1 value for the ACPI Passive Cooling Formula. Use "+" and "-" keys to change value.
Passive TC2 Value	1,2, …,**5**,…16	This value sets the TC2 value for the ACPI Passive Cooling Formula. Use "+" and "-" keys to change value.
Passive TSP Value	2,4, …,**10**,…32	This value sets the TSP value for the ACPI Passive Cooling Formula. It represents in tenths of a second how often the OS reads the temperature when passive cooling is enabled. Use "+" and "-" keys to change value.
Thermal Sensor Device Enable	**Disabled** Enabled	Enable Thermal Sensor Device.
ME SMBus Thermal Reporting	**Disabled** Enabled	Enable/Disable ME SMBus Thermal Reporting Configuration.

Function	Description
Exit Saving Changes	Equal to F10, save all changes of all menus, then exit setup configure driver. Finally resets the system automatically.
Exit Discarding Changes	Equal to ESC, never save changes, then exit setup configure driver.
Load Setup Defaults	Equal to F9. Load standard defaults values.
Load Optimized Defaults	Load settings for optimized boot time and system performance.
Discard Changes	Load the original value of this boot time. Not the default Setup value.
Save Changes	Save all changes of all menus, but do not reset system.
