

➤ JRex-GX1

- Communication and Visualisation onboard
- Embedded 300 MHz processor board
- Reduced time-to-market, plug-and-work
- Member of the JRex 3.5" board family

Product Overview

Each JRex is a member of the 3.5" board family. JRex modules are characterized by the same pinout and interface for Reset, ATX feature, 2xUSB, FAST LAN, Keyboard/Mouse-socket, Compact-Flash™, VGA and COM1. This family feature allows to reuse chassis and maximizes design re-use.

This JRex-GX1 hosts a fanless National Geode™ GX1 CPU at 300MHz. A SDRAM-DIMM socket for up to 256 MByte allows the use of standard

desktop memory and full ATX power supply is as well a standard feature. These homogeneous features facilitate easy upgrades within the JRex product family. Connection of displays (18bit TFT) is simplified when using these units which are complete with a JILI-Interface (JUMPtéc® Intelligent LVDS Interface). JILI automatically recognizes which display is connected and independently sets all video parameters. All JRex are plug-and-work enabled to further reduce time-to-market.

...always a Jump ahead!
