- fully managed layer 2 & 3 switching and routing
- rugged, reliable & robust
- versatile, complete rear I/O and uplink support
- DHCP server & boot media support
The Kontron CP6930 is a non blocking fully managed L2/L3 10 Gigabit Ethernet Switch and provides rich and versatile feature support by using highest integration of Ethernet switch silicon.

**Bandwidth**
The CP6930 is designed for future oriented applications requiring outstanding bandwidth and communication safety. 6 SFP+ front ports running at 10 Gigabit/s full line speed and 2 SFP ports at the front providing 1 Gigabit support gives flexibility and an intrinsic value for today’s investments. The 24 rear ports according PICMG2.16 and VITA31.1 fulfill the requirement of CompactPCI and VME systems with highest computing performance.

**Reliability**
The robust design features including hardware hot swap as well as complete SNMP management support sets the foundation for robust and reliable systems. Built-in test capabilities enable effective switch maintenance.

**Management**
The CP6930 can be monitored via SNMP, which also allows access to the devices connected to the backplane. A comprehensive command line interface provides easy management and remote configuration by either serial or network interface.
Support for features like IP forwarding & multicast, routing & switching, Quality of Service, VLANs it is an ideal Switch for CompactPCI and VME systems according PICMG2.16 and VITA31.1.
